## SUMMARY

- **Software Development Engineer** with experience in building scalable backend systems, distributed architectures, and high scale financial and real time platforms using **Golang, Redis, MongoDB**, and **gRPC**. Built and optimized production systems involving webhook orchestration, caching, sharding, AI agents, workflow automation, and concurrent data pipelines. Contributed to large scale products including **JioMeet Plus**, **JioWorkspace**, and fintech systems like **smallcase**, with strong focus on performance, reliability, observability, and infrastructure efficiency.

## EXPERIENCE

- **Smallcase (case platforms)** Bangalore, India (Remote)  
• **Software Development Engineer** Sep 2025 - Present
  - Built scalable backend systems for **SIB onboarding, pledge workflows**, agreement processing, and webhook orchestration using **Golang, Redis**, and **MongoDB**; refactored LAMF to be multi lender agnostic, cutting new-lender integration down to a config-driven change instead of a code change.
  - Designed distributed components including **Redis caching, IP whitelisting**, OTP state management, dynamic webhook routing, and retry mechanisms, eliminating silent webhook drops across multi replica, multi partner environments.
  - Built a **multi lender admin dashboard** with unpledging and cancellation workflows.
  - Developed secure financial workflows covering **dual signature agreements**, pledge collateral submission, webhook integrations, and lender verification, with zero reported reconciliation errors since launch.
  - Deployed **Kafka** using **Strimzi** in production for reliable event streaming, and resolved long-standing legacy **race conditions** as part of technical debt remediation.
  - Built an **AI powered CAS parser** that automates equity holding extraction, validation, and loan eligibility processing from uploaded statements, cutting a manual multi-minute review down to a near-instant automated check, as an alternative to **Account Aggregator** integration.
  - Built an **AI powered debugging agent** with **Claude, Elastic MCP**, and **Redash MCP** that automates production investigation and root cause analysis across logs, databases, and codebases, cutting **mean-time-to-root-cause by 70%** across production tickets handled monthly.
  - Built **contextual AI memory** and SOP driven agents for lender specific business logic, onboarding journeys, and production debugging, reducing manual triage by **60%**.
  - Integrated external systems through **APIs, webhooks**, Redis, and middleware architectures across **3 partner platforms**, improving reliability and observability of partner integrations.
- **JIO Platforms** Navi Mumbai, MH  
• **Software Development Engineer** Oct 2023 - Sept 2025
  - Engineered **Jiomeet+** (over **20 million active users**), integrated over **15-20 critical features** and refactored **legacy code**, including key functionalities such as **status management, real-time document collaboration**, and **link unfurling** using cloud functions, real-time document collaboration, enhancing collaboration experience and improving engagement by **30%**
  - Contributed to the development of **JioWorkspace** a collaborative workspace application. Integrated **Keycloak** for secure authentication and handling login/logout flows across the platform.
  - Built **User Status Management** with **publisher-subscriber model** for multi-device support. Implemented a **Bloom filter**-based architecture during new account creation, reducing redundant database calls and decreasing **CPU utilization by 40%**.
  - Revamped **Elasticsearch** functionality by introducing a **recency-based** scoring algorithm and optimizing **fuzzy search** mechanisms, resulting in significantly faster, more accurate, and contextually relevant search results.

## SKILLS

- **Languages:** C++, Java, Go, Python, JavaScript/TypeScript
- **Backend Technologies:** Spring Boot, gRPC, REST, Node.js, Express, WebSockets, Socket.IO, RabbitMQ, Apache Kafka
- **Databases:** PostgreSQL, MongoDB, Redis, CockroachDB, Elasticsearch
- **Infrastructure:** Docker, Kubernetes, AWS, GCP, NGINX, ArgoCD
- **Architecture:** Microservices, Distributed Systems, Transactional Systems, Idempotency & Exactly-Once Delivery, Sharding, Event-Driven Architecture, Pub/Sub, Worker Pools, Caching Systems, Webhook Orchestration, Root Cause Analysis Automation, AI Agents

## EDUCATION

- **Savitribai Phule Pune University** Pune, Maharashtra  
• **Bachelor of Engineering - Computer Engineering; CGPA: 9.47/10** Feb 2021 - July 2023
- **Government Polytechnic Amravati** Amravati, Maharashtra  
• **Diploma in Computer Engineering; Aggregate: 83.81%** July 2018 - October 2020
